### **RECOMMENDATIONS**

Setting overall general management recommendations for the non-forest palustrine type with all its components is impractical. Each Species of Greatest Conservation Need preferring this type as breeding habitat has its own management recommendations that include specific treatments applied to the habitat components needed by that species.

There are several riparian guidelines and laws governing riparian management which should be reviewed on a state-by-state basis.

For New Hampshire, the following chapters in goodforestry.org address riparian guidelines and other related resources:

- 4.1 Water Quality
- 4.2 Wetlands
- 4.3 Forest Management in Riparian Areas
- 4.4 Stream Crossings and Habitat
- 7.2 Seeps
- 7.3 Vernal Pools and the Surrounding Forest
